

RECREATIONAL
RESPITE

Summer Camp Fun Ages 5-10

Play is one of a young child's most powerful cognitive and social learning tools. Building these skills in young children with various special needs will maximize their capacity for positive interactions and overall recreational and social engagement.

Over the course of this fun filled week children participating in the camp can expect to take part in several diverse activities developed and implemented by skilled Recreation Therapists that will give them an opportunity to practice and improve their social skills and self esteem as well as many other important skills.

The activities include:

Yoga and meditation, dance and movement, large motor skill group games, snack preparation, arts and mixed media exploration, science experiments, building with LEGO and other materials and literacy learning activities.

SSAH funding can be used for our program(s).

Staff Ratio 1:5

Community Safety Village
