

STEM Lego Builders Ages 9-13

The STEM Lego Builders program (science, technology, engineering and mathematics) has been developed with combined interests, in this unique LEGO Builders program for youth. We need more scientists and innovators and STEM education based programs holds the key. Building rockets, robots, and other cool contraptions help children and youth become creative thinkers and problem solvers.

Play is one of child's most powerful cognitive and social learning tools. Building these skills will maximize their capacity for positive interactions and overall recreational and social engagement. Our team is comprised of Recreation Therapist's who possess the skill to individualize the goals and objectives for each participant in order to enhance participation and inclusion in all programs.
